

# Community

## SO ANYONE CAN CHARGE WITH YOU

COMMUNITY is a free software feature that can be activated in the backend of be.ENERGISED for each charging station and charging point – It's an ideal added-feature for chargingstation operators. Simply set up the charging rate & information and automatically become part of an international charging network. External charging customers can use a QR code and smartphone to pay and charge at your station.

### WHY COMMUNITY?

- Can be activated easily in the application and per charging station ■
- High compatibility with more than 640 charging-station types ■
- Publication in current forums & web portals ■
- Provision of your station in international roaming networks ■
- Discrimination-free access with variable payment options ■
- Your all-round worry-free invoicing service ■

### VISIT OUR WEBSITE!

Information about compatible charging stations can be found here:  
[beenergised.com/en/knb-article/compatible-charging-stations/](http://beenergised.com/en/knb-article/compatible-charging-stations/)

### BENEFITS

You configure the cost per hour once for charging at your station and we take care of the rest – the simply invisible service of has-to-be.

**No additional contracts**  
for you as a charging-station owner

**Publishing on roaming platforms**  
Automatic publishing, contracted & free on Gireve & Intercharge

**Invoicing, accounting, clearing & dunning**  
No administrative effort

**No payment-default risk**  
The risk is carried by has-to-be

## SCOPE OF SERVICES

### AUTOMATIC MARKETING

With COMMUNITY, your charging station is displayed via our interfaces in many current charging-station directories and charging-station finder platforms. Thanks to real-time status display, users can see if a charging point is free or busy.

### CHARGING STATION MANAGEMENT

You get a detailed overview of all charging processes, charged energy (kWh) and duration. An export feature is included for the charging data.

### CONTRACTFREE PAYMENT

Customers can pay at their charging station online with PayPal or credit card. It's easy via the provided mobile website, which is accessible via a QR code scan.

### AUTOMATIC INVOICING

COMMUNITY takes over all billing for external charging, and you decide the tariff in advance.

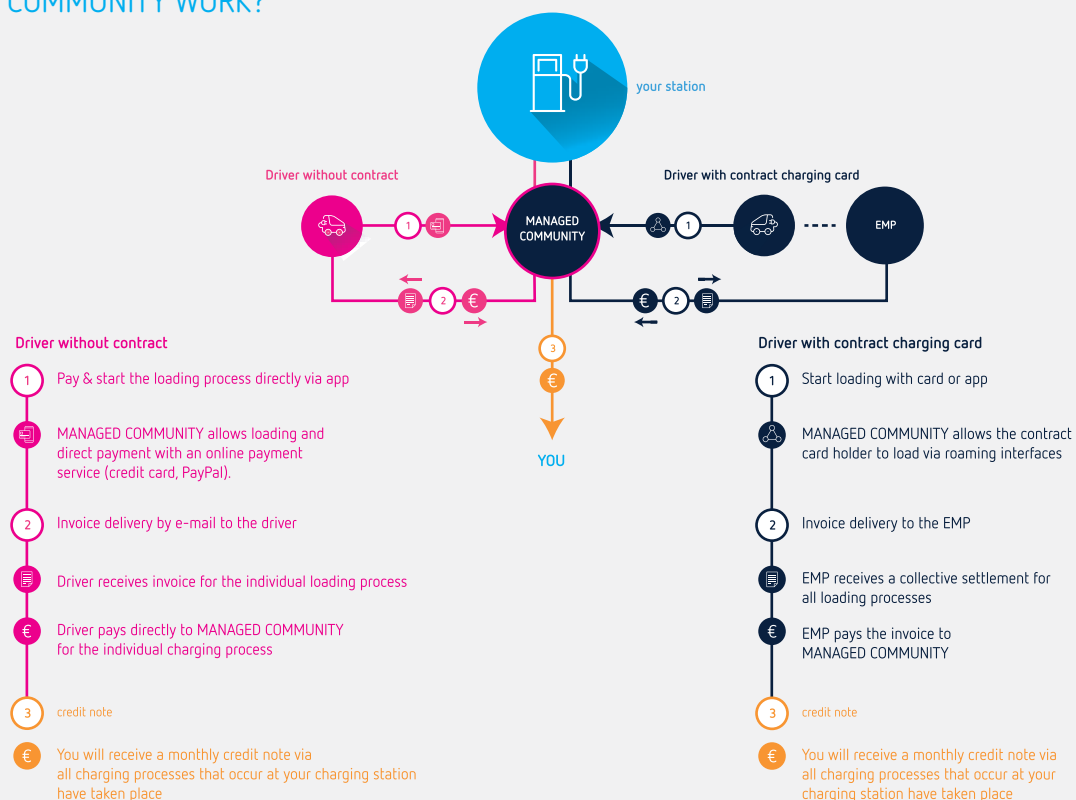

### YOUR DATA IS SECURE

be.ENERGISED is operated by has-to-be on security servers. The data centres operate independently of each other redundantly and are certified under ISO 27001, ISAE3402, ISO 9001 and PCI-DSS.

### ROAMING OPEN TO EVERYONE

You can offer third-party customers non-discriminatory charging. The charging processes can be activated by means of an external charging card or app from an electricity supplier. Invoicing is done fully automatically by has-to-be.

## HOW DOES COMMUNITY WORK?

## ACTIVATE COMMUNITY FREE

You can find step-by-step instructions here for activating COMMUNITY:
